- * All specifications are valid for normal climatic conditions, Uin.nom., Iout.nom., unless otherwise stated.
- ** Parameters are stated for the information purposes and could not be used at long term work, exciding maximum output current, at work outside of a range of operating temperatures.
- *** For other output voltages the maximum output capacity is calculated from the fact that $C_{max} \times U_{out}^2$ is a constant.
- **** Typical efficiency - for input 12 VDC (input range 12 W), 24 VDC (input range 24 W) and output 5 VDC, output power is 0.7*Pmax, Tcase +60°C.
